

# Genes and medications analyzed by the CBR Landscape™ genetic test

by CooperSurgical®

CBR Landscape™ analyzes 1,500+ genes and is one of the most comprehensive pediatric health screenings available. Also includes pharmacogenetic (PGx) testing, which helps determine how a child's genetic make-up influences their body's response to 100+ medications.<sup>1</sup>

## GENES TESTED

### Blood

## MEDICATIONS TESTED

Pharmacogenetic results are generally broken down into three categories based on the current available scientific evidence: actionable, informative, and standard precautions.

**Actionable** results may be used by the treating physician to adjust dosages or medications. (No adjustments should be made before consulting a physician.)

**Informative** results have implications for the patient's metabolism of certain drugs; however, no actionable guidelines are currently associated with them.

**Standard precautions** means that at the time of testing, the results did not indicate any implications for the patient's metabolism of that drug, and therefore standard precautions should be taken.
